

Your Tractor is Calling.

Because the key to any good relationship is constant communication.

Long-distance relationships are simple with the right tools

Now, you can set up your tractor to tell you how you can make changes to improve performance and productivity.

How? JDLink™ lets you monitor your tractor's performance when you're in the office, at the coffee shop, or even out of town, so you can better manage your operation, your machines, and your costs. You get real-time alerts and machine specific data through web, e-mail, or text.

You'll know where your machines are, whether they're under load or idle, and you can even check vital machine info. Turn the page for a list of all the functions you can perform and monitor, and see how better communication with your equipment can lead to a more profitable relationship.

JDLink™ is an available feature on 2011 IT4 8R Series Tractors with one year of complimentary JDLink™ Ultimate Service. It's also available on select self-propelled John Deere machines, as well as some competitive equipment.

JDLink™: The best connection to your machines since duct tape

JDLink™ Select. This all-makes, all-model solution is compatible with any 12- or 24-volt power source, and lets you:

- View current hours of any machine or group of machines
- Identify machine location; send driving directions via e-mail to your operator
- Get curfew alerts when machines are being used at unauthorised times
- Receive notice when machines exit any area you've selected
- Maintenance alerts inform you when service is due or required

JDLink™ Ultimate. An advanced green-on-green integrated solution, you get everything included in JDLink™ Select, plus the ability to:

- Monitor idle time to decrease fuel costs
- Monitor vital machine data, including fuel level, temperatures, and pressures; help your operators make adjustments to changing conditions
- Route diagnostic trouble codes to your laptop or smart phone
- Compare machines side-by-side to evaluate field conditions or workloads
- Use Service ADVISOR™ Remote functionality to reduce downtime

Turn the page for more information on how Service ADVISOR™ Remote can save you time and money.

| Low Fuel | Bob BR | Air filter Restriction | 11/24/08 | Activate |
| Low Fuel | BR -1 | Low Fuel | 10/26/08 | Activate |

Service ADVISOR™ Remote: Health care for your tractor

Your tractor's engine just doesn't sound right. So now you're torn between wanting to finish the job at hand (risking further damage) and counting the dollars you're losing while your machinery stands idle.

Suddenly the John Deere dealership truck pulls over, which is strange, because you haven't called him yet. He glances at the tractor, and without opening its hood or cab door, he explains what's wrong. He already has the parts and tools in hand, as well as a diagnostic printout. Within minutes, you're back in the field, and the tractor sounds like it just rolled off the assembly line.

Welcome to Service ADVISOR™ Remote, a quantum leap in machine diagnosis and preventative maintenance. With your permission, Service ADVISOR™ Remote allows dealers to diagnose your machines from the dealership, reducing the time and expense of field visits, as well as costly downtime.

Service ADVISOR™ Remote uses the JDLink™ network to connect to your machines. With your permission, your dealer can retrieve, clear, and refresh diagnostic service codes; they can even install software updates that you approve, saving the time and expense of a service call.

The sign of a new relationship

As we stand at the dawn of a new information age, where the data you collect is nearly as important as the crops you harvest, having a trusted business partner in your corner is more important than ever. And who better to help you than your local John Deere dealer?

We stand committed to helping you more efficiently capture, use and analyse your data. We want to help transform operational data into actionable, information-based insights to improve your productivity. And we're re-shaping our dealerships and personnel with better tools and training

to be your first choice when it comes to business and agronomic decisions, as well as equipment purchases.

Stop by your John Deere dealership today. And start building a whole new business relationship that you can count on tomorrow.
